

NextGen Transcription Services

A speech-driven solution that makes documentation faster and frees providers from the EHR

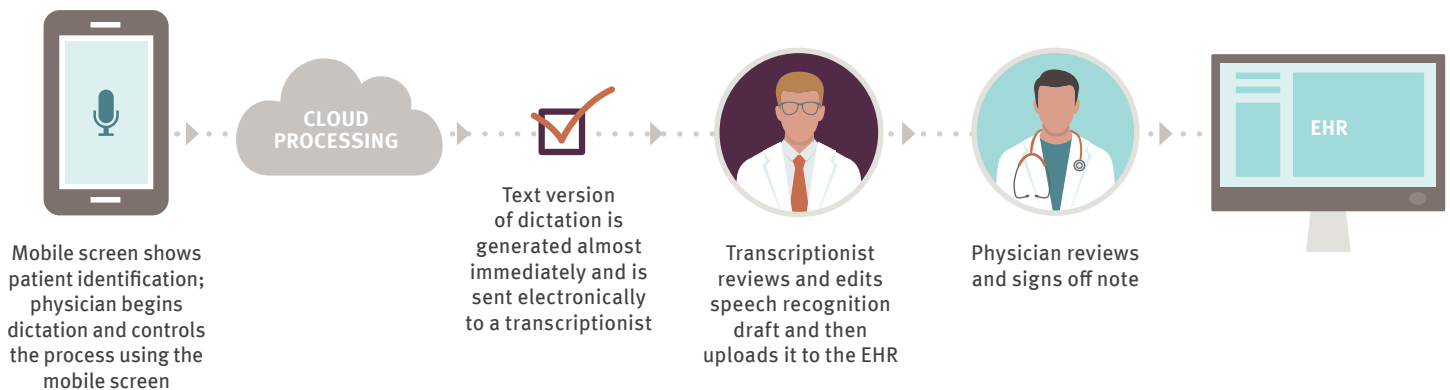

Average time spent in the EHR each day by US providers¹

At NextGen Healthcare, we think that's *way too much*.

What if providers could document on the go, away from the EHR?

Flexible and cost-effective, NextGen[®] Transcription Services helps keep each clinical encounter focused on the patient, not a computer screen. Increase productivity while reducing stress.

How NextGen Transcription Services works

NextGen Transcription Services

If you use NextGen[®] Mobile, you can have voice-to-text transcripts edited by a professional service. This option is highly customizable according to practice needs and each provider's preferences.

Convenient mobile dictation

A physician walks out of the room after seeing a patient, smartphone in hand, clicks a button on the NextGen Mobile app, and starts dictating. In many instances, the physician can complete all their dictation before the next encounter.

Ease the documentation burden

A text version of the dictation is generated electronically by speech recognition software and sent to NextGen Healthcare's transcription service. A transcriptionist edits the content and sends it back to the practice within 12 to 24 hours. The edited dictation is uploaded into a predetermined template within the EHR to be signed off by the physician. Options are available; for example, for an additional cost, physicians can request STAT turnaround, with edited content back in two hours.

Benefits

- Document anywhere, anytime
- Significant reduction in charting time
- Increased physician productivity—may enable your practice to increase patient volume
- Improved patient-provider interaction because the distraction of the provider documenting into the EHR is removed
- Increased patient satisfaction
- Much less burdensome than traditional documentation
- Frees healthcare providers from the EHR
- Finish the clinic day with no charting after hours

“I see a patient, spend about 45 seconds dictating, and it’s done. The most significant aspect of NextGen Mobile and NextGen Transcription Services is ease of use. Press two buttons, and it’s handled.”

Sebastian B. Heersink, MD

Cataract and Laser Refractive Surgeon and Cornea Specialist
Eye Center South
Dothan, Alabama

With their combined ability to streamline and expedite clinical documentation, **NextGen Mobile and NextGen Transcription Services can be an essential, integrated extension to your EHR.**
